

RITRANSPARENCY REPORT 2020

InfraRed Capital Partners Limited

About this report

The PRI Reporting Framework is a key step in the journey towards building a common language and industry standard for reporting responsible investment (RI) activities. This RI Transparency Report is one of the key outputs of this Framework. Its primary objective is to enable signatory transparency on RI activities and facilitate dialogue between investors and their clients, beneficiaries and other stakeholders. A copy of this report will be publicly disclosed for all reporting signatories on the PRI website, ensuring accountability of the PRI Initiative and its signatories.

This report is an export of the individual Signatory organisation's response to the PRI during the reporting period specified above. It includes their responses to mandatory indicators, as well as responses to voluntary indicators the signatory has agreed to make public. The information is presented exactly as it was reported. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory to select are presented in this report. Presenting the information exactly as reported is a result of signatory feedback which suggested the PRI not summarise the information.

PRI disclaimer

This document presents information reported directly by signatories. This information has not been audited by the PRI Secretariat or any other party acting on their behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented, and no responsibility or liability can be accepted for any error or omission.

Usage restrictions

Public Transparency Reports are the intellectual property of PRI. Under no circumstances, can this report or any of its contents be sold to third parties.

Climate change

Other RI considerations, specify (1)Other RI considerations, specify (2)

Describe your organisation's investment principles and overall investment strategy, interpretation of fiduciary (or equivalent) duties, and how they consider ESG factors and real economy impact.

In 2019, InfraRed revised its vision and investment strategy to "Investing in Real Assets with Real Purpose to create a Sustainable Future" for all our stakeholders, not only for our investors, but also for our partners and especially the users of our assets and the surrounding communities which benefit from new or refurbished buildings or infrastructure. InfraRed strives to be a responsible investor and to develop and manage long term sustainable real estate and infrastructure assets. Both our Business Lines also revisited their respective visions, both available on InfraRed's public website.

InfraRed's motivation stems from a belief that the ability to identify, assess and manage ESG considerations can provide sustainability and a positive ethical impact on our investment and corporate performance, local communities and society at large.

InfraRed has developed and integrated ESG analysis into our investment process to ensure that related risk factors and opportunities are considered throughout the investment cycle. In addition, we make certain we understand how the issues of sustainable investment are addressed by our business associates and encourage our partners to adhere to the highest standards of corporate conduct and implement corporate governance framework in line with applicable country codes.

SG 01.5

Provide a brief description of the key elements, any variations or exceptions to your investment policy that covers your responsible investment approach. [Optional]

InfraRed's overall RI-ESG policy is approved by its Governance Board and is reviewed annually. There are separate but complimentary policies for the listed infrastructure funds and private real estate and infrastructure funds, as outlined in the next indicator SG 02.

InfraRed's policy relates to all parts of its business and explicitly applies to all elements of ESG.

This high-level policy is integrated in the infrastructure investment process through the use of a comprehensive checklist, drawing out details specific to the type of opportunity in question, i.e. the sector, development project or operating asset; separate sector-specific guidance is provided to deal teams and asset managers. In Real Estate, ESG analysis is a core part of the template investment paper.

Integration is supported further by training for InfraRed individuals, especially those serving as directors on project company boards, and, increasingly, on a workshop basis for third party project company managers. The monitoring of these third-party managers' ESG performance is systemic and consistent, driven by an online reporting tool and assessment by InfraRed.

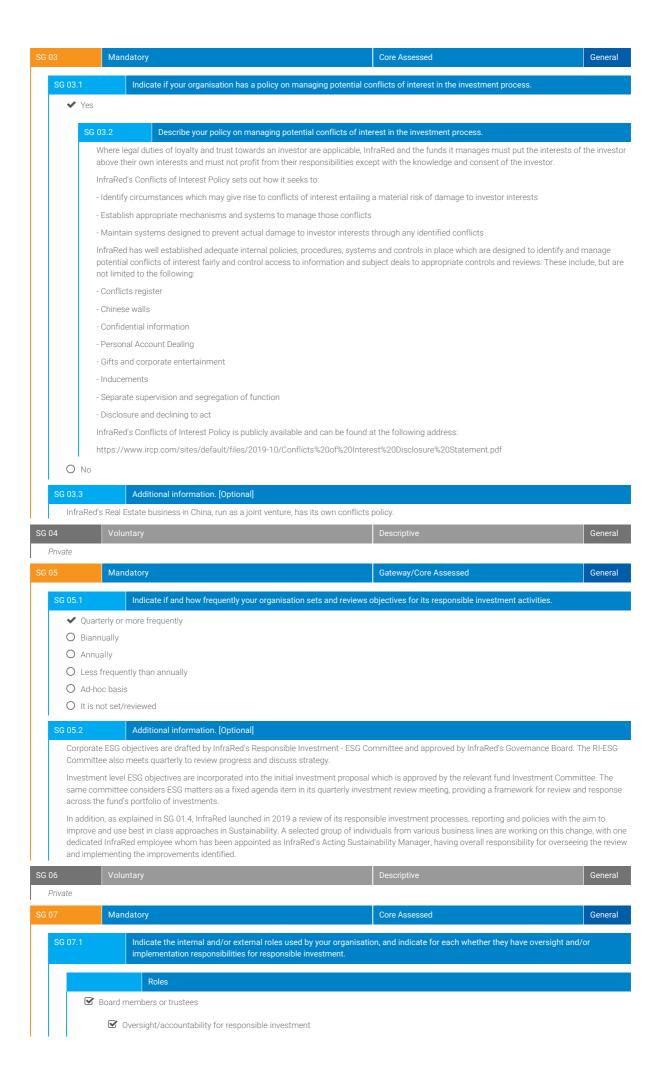

ESG is a fixed part of the quarterly reviews conducted by InfraRed on all of its projects.

As explained previously, the RI-ESG Policy is being revisited and a new improved Sustainability Policy will be launched in Q2 2020. This will involve meaningful improvements in the definition and operational of InfraRed's investment policy.

As part of its overall commitment on Sustainability, in 2019 InfraRed commenced an initiative to work with a third-party consultant specialised in Sustainability to further enhance the current processes and ensure that InfraRed remains at the forefront of sustainability matters when it comes to our investments and internal corporate practices. This initiative includes a review of all InfraRed sustainability processes throughout the lifetime of an investment opportunity. One of the workstreams will be to assist InfraRed develop a sustainability reporting framework which will set out Key Performance Indicators to report against at a firm, fund and asset level. Other workstreams include updating InfraRed's Sustainability policy, the introduction of a firm-wide Exclusion list and incorporating sustainability objectives into all staff's annual performance reviews which directly impacts their overall renumeration.

Core objectives include to:

- Promote good ESG and strive for best practice;
 Ensure the current ESG policy remains fit for purpose;

- Ensure InfraRed's values remain aligned;
- Ensure all individuals understand the importance of good ESG;
- · Arrange training where appropriate;
- Ensure all reporting is being undertaken in an efficient and timely manner;
- Ensure all regulatory risk is considered and mitigated;
- · Develop our ESG communications; and
- Monitor developments in the market and our competitors.

In 2019, a number of staff also had specific ESG related objectives written into their formal annual performance appraisal process. As part of the Sustainability initiatives launched in 2019, all staff will be required to include a Sustainability objective in their annual performance objectives for 2020. This will then feature in the annual performance appraisal process in 2020 which links directly to overall renumeration.

The central Finance function has a particular responsibility for helping the two main business lines implement responsible tax arrangements, and has a degree of oversight regarding how structuring, etc. is carried out.

As part of the Sustainability initiatives launched in 2019, InfraRed will look into adding a Sustainability objective into all of its employees' objectives. This will then feature in the annual performance appraisal process starting in 2020.

Indicate the number of dedicated responsible investment staff your organisation has. InfraRed is looking to hire a dedicated long-term resource who will be responsible for evolving InfraRed's sustainability strategy and implementing the sustainability strategy in accordance with the revised Sustainability Policy. In the meantime, in 2019 InfraRed appointed one of its current employees as the Acting Sustainability Manager who has been carrying out this role with the support of the business. The Acting Sustainability Manager reports to the CEO in the first instance Descriptive Private SG 08 Private PRI 4.5 Select the collaborative organisation and/or initiatives of which your organisation is a member or in which it participated during the reporting year, and the role you played. 	Description
	TRIG, InfraRed's listed renewable energy fund, issued its first ever Sustainability and Responsible Investment report. The document provides
	a description of the Fund's approach to sustainability investment, understanding, and positive impact to societies through numerous ESG
	initiatives. InfraRed is working towards producing its own Sustainability Report which will report on the sustainability performance of our
	portfolio and our internal corporate operations. The intention is that this report will be published in 2021. With regards to its document "ESG Best Practice Guidance for SPV Managers", as detailed in previous answers, InfraRed continues to promote, update and improve the guide.
	It is currently undergoing a thorough review in order to provide an update in the coming year.

To clarify, a large majority of infrastructure projects (by number and by value) are held by the listed funds HICL and TRIG, to which InfraRed acts as Investment Manager/Adviser. The level of public disclosure is extensive and under market rules takes place equally in respect of the public and shareholders (i.e. the beneficiaries). The level of public disclosure for private unlisted funds is lower; this is standard practice in the industry and a requirement or expectation of investors.

🗹 If there are any messages below, please review them before continuing. If there are no messages below, please save this page and continue.

Sustainability lies at the heart of InfraRed's culture and investment philosophy. We acknowledge that the assets we invest in are embedded in communities and the environment, which means that the consequences of the investment decisions we make can have a meaningful positive or negative impact on society and the world around us. Sustainable investment decisions can therefore create value and / or mitigate risks for a wide range of stakeholders, including our investors, our communities and our business.

In 2018, InfraRed redefined its vision to "Investing in real assets with real purpose to create a sustainable future", with the Real Estate business line defining its vision as "Creating spaces to inspire people's lives". As part of this evolution, InfraRed developed a new sustainability strategy in 2019, that enables the businesses vision to be delivered and brings its culture together through two internationally recognised frameworks, The Principles of Responsible Investment and the UN Sustainable Development Goals.

Our sustainability strategy has been developed through workshops engaging employees and investors, to ensure that we have business wide commitment to its delivery and its implementation not only focusses on activities InfraRed undertakes through its investment and asset management strategies, but also by leveraging the activities of its business partners, so as to maximise our collective impact:

European Real Estate and the China Funds:

InfraRed believes that the adoption and monitoring of environmental, social and governance (ESG) policies (aligned to its sustainability strategy) as part of its investment and asset management processes is integral to its investment strategy for both value-add and core+ funds and each project's business plan identifies ESG opportunities and targets to be implemented over an asset's hold period.

The implementation of initiatives identified at purchase are monitored on a project by project basis throughout the hold period and reported on at quarterly project review meetings with InfraRed's Real Estate senior management team and then at Investment Committee. Progress and outcomes are communicated to investors through quarterly reporting, biannual Advisory Committee meetings and at InfraRed's annual investor event. Below is a summary of the ESG implementation:

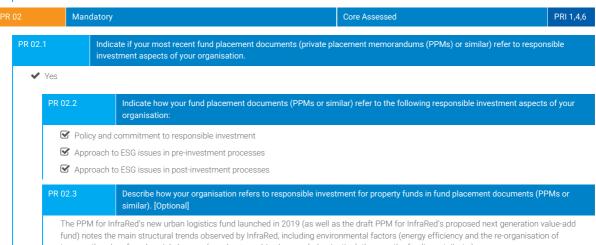

InfraRed adopts a two-stage process at acquisition:

Stage 1 - Pre-Acquisition Checklist: To identify 'red flag' issues in respect of due diligence matters, including ESG considerations, as described in question 2.1

Stage 2 - In developing the Project Business Plan, the deal team are required to identify a number of ESG initiatives that are to be delivered through the hold period and that these targets are specifically reviewed and approved by the Investment Committee when they sign off the acquisition.

ESG is embedded into our sourcing and asset management decision making process and is a key driver of value, as well as ensuring our assets positively impact the communities in which they are located and provide a purpose, beyond the financial, for our employees and on-site teams. The above, along with our active management mindset, inevitably means that InfraRed acquires buildings which it believes can be improved by capital investment, often having a positive impact on the environmental attributes of the building and the community in which the building is located. It also brings this mindset to development sites, seeking recognised environmental certifications and finding opportunities to engage the community through the development process and beyond.

Strong governance regimes also lie at the heart of InfraRed's business strategy, something that is proven regularly as assets subject to significant works of construction are sold without due diligence challenges. InfraRed receives higher resale valuations for properties that have benefited from modernising works (be they delivered through capital works or operational best practice) that improve energy efficiency and where a track record of positive community engagement can be demonstrated - making it a key focus of our business plans and day to day operational mindset.

transport) and profound social changes (e.g. demographic changes (urbanisation), the growth of online retail, etc.).

The investment process is detailed, including a description of how ESG matters and initiatives are required to be identified during the due diligence phase and incorporated into each Project's Business Plan.

These are reviewed by the Investment Committee as part of approving each acquisition.

An explanation is also provided of asset management in general, including the focus on ESG and the need for business plans to deliver on the fund's investment themes and those ESG initiatives identified and approved as part of a project's Business Plan.

The PPM for the new China fund, focused on mainland property investments, includes a description of how responsible investment is reviewed at

different stages of the investment process. The ongoing need for compliance with local environmental laws, ordinances and regulations is also noted. In addition, investors are reminded of the unique political, social and corporate governance conditions in the People's Republic of China.

O Not applicable as our organisation does not fundraise

PR 03 Voluntary Additional Assessed PRI 4

Private

PR 04 Mandatory Gateway/Core Assessed PRI 1

PR 04.1 Indicate if your organisation typically incorporates ESG issues when selecting property investments.

✓ Yes

PR 04.2 Provide a description of your organisation's approach to incorporating ESG issues in property investment selection.

As set out in PR 01.3, InfraRed developed a new sustainability strategy in 2019, with activities shaped around relevant UN Sustainable Development Goals. ESG initiatives are aligning to these goals, as InfraRed continues to believe that the adoption and monitoring of environmental, social and governance (ESG) policies as part of its investment and asset management processes is integral to its added value and core+ investment strategies.

In 2019, InfraRed undertook work to enhance g its ESG approach, in particular through the development of sector guidance notes, to ensure increased sharing of knowledge around ESG matters impacting value, and the development of consistent KPIs across its Real Estate and Infrastructure business lines, to be reported on to all key stakeholders. These will be implemented in 2020 and during 2019, in line with its current ESG Policy, the European Real Estate Team continued to integrate ESG analysis and delivery into their property investment processes to ensure that ESG targets are incorporated into Business Plan recommendations ahead of purchase and performance is monitored, measured and communicated during ownership. In addition, third party consultants appointed to assist in delivering Business Plan and ESG initiatives are usually engaged during business plan formation stage and obliged to follow InfraRed's ESG policies via terms within their appointment documents.

The processes and tools that accompany InfraRed's ESG Policy are designed to enable those involved in the acquisition of real estate assets (Deal Team) to incorporate ESG targets into Business Plan recommendations to be made to the Investment Committee ahead of purchase, balancing desirability from an environmental and/or social perspective against the impact implementation will have on investment performance.

InfraRed adopts a two-stage process at acquisition:

Stage 1 - an early-stage duty on the Deal Team to identify ESG red flags, i.e. to highlight obvious and material areas of concern (energy usage, building energy ratings, flood risk, etc). Red Flags do not mean we will not buy, rather that our Business Plan may proceed by incorporating strategies to remedy these issues. There is very low tolerance for any risks related to bribery / corruption or health& safety.

Stage 2 - each Property Investment Paper, will summarise the ESG profile of the prospective investment and each Business Plan will usually include several ESG initiatives to be delivered over the hold period. This receives Investment Committee approval as part of the decision to purchase.

The China Real Estate Team has a detailed set of procedures and approval processes in relation to the making of new investments. These include ESG considerations as part of the initial opportunity assessment as well as the subsequent detailed due diligence process. Where appropriate, external technical consultants would be engaged to undertake a detailed assessment of the asset under the supervision of the Technical Director. The Sponsoring Investment Director (together with the Technical Director and ESG Champion) would analyse the results of the due diligence, including any environmental, resettlement, anti-bribery and health and safety issues identified during the due diligence process. Any issues identified would be set out in the investment approval paper and discussed and considered as part of the investment decision (applying the company's ESG Policy). Consideration of environment, social factors and good corporate governance will also form part of the transaction sign-off.

Decisions to enter into an investment are made by the relevant Investment Committee which comprise of members with relevant industry and sector experience. The Investment Committee requires that all investment proposals consider the approach to ESG. The Investment Committee is aware of the ESG Policy and its approval decisions are based on investments aligning with this policy.

PR 04.3

Indicate which E, S and/or G issues are typically considered by your organisation in the property investment selection process, and list up to three examples per issue.

☑ Environmental

Energy efficiency

Environmental example 1, description

InfraRed will assess the energy performance of an asset during the property investment selection process and identify areas where improvements can be made. It will then take a proactive approach to implementing planned preventative maintenance programmes across all asset classes throughout the hold period. Invariably, this involves modernising / replacing old plant with new plant and fittings that are more energy efficient, as well as incorporating controls to further reduce energy consumption.

Energy efficiency

Environmental example 2, description

Environmental considerations underpin the property investment selection and due diligence process to ensure that we identify assets where InfraRed can transform existing or develop new real estate products in an environmentally efficient and sustainable way. Recent examples include the acquisition of an environmentally obsolete building in London (EPC Rating: F) and refurbishment of a 17k sqft office building in London securing a BREEAM rating of Very Good; and the construction of a 14.300 sqm new build office scheme in France delivering Grade A office space achieving energy efficiency ratings of HQE "Excellent" and BREEAM "Good", primarily through enhancing the building's use of energy and water from sustainable sources, as well as the optimisation of interior air quality. In China, we incorporate energy saving air conditioning and lighting systems as well as water recycling system into our office refurbishment projects, thereby consuming less natural resources and reducing wastes. For our loan investment relating to a residential development project, environmental due diligence was conducted on external noise, odour, water and dust pollutions in respect of the development site, to ensure that the residential properties are environmentally suitable to the end-users.

Contamination

Environmental example 3, description

InfraRed will proactively deal with any contamination that is disclosed throughout the Pre-Investment selection process by challenging the remediation plan and assessing the long-term consequences for occupiers and future owners. A recent example of this was the acquisition of a senior living development opportunity in France where contamination was found through the due diligence process. InfraRed adopted a proactive approach to this issue to ensure that the contamination was remediated and/or contained effectively to allow the full area of the site to be used for buildings or landscaping. We also took a proactive approach to a German development opportunity which comprised the demolition of 4 obsolete and energy inefficient commercial buildings and the construction of a 23,000 sqm new-build office scheme in the

Sendlingen suburb of Munich. The demolition included the remediation of residual ground contamination which was completely successfully and in line with Business Plan.

Social

Health, safety and wellbeing

Social example 1, description [OPTIONAL]

Social principles of health, safety and wellbeing are considered by InfraRed throughout the investment selection process especially when the opportunity involves hands-on operating partners. We will partner with 'best in class' operators across the sectors who will proactively drive these principles on the ground and through delivery of Business Plan initiatives. An example of this throughout 2019 was InfraRed's work with its shopping centre managing agent to transform vacant space within our shopping centres to provide new community services including a pop-up one stop shop for advice and support on mental health and wellness issues (Liverpool), honesty libraries where people can swap, drop and donate books (Bury, Norwich) and meeting points for the elderly (Norwich).

Socio-economic

Social example 2, description [OPTIONAL]

Similarly InfraRed w continue to hold a number of very successful job fairs across our shopping centre portfolio where local and national employers are invited to recruit people directly from the local area. These are very well attended annual events which are popular with companies and candidates alike. Moreover, our active management approach inevitably means we are investing capital to improve assets. This not only creates jobs during the construction phase, but benefits the wider socio-economic environment, as that investment typically leads to greater levels of occupancy and in turn, job creation by our occupiers.

Health, Safety and wellbeing

Social example 3, description [OPTIONAL]

The French office portfolio has adopted a theme within their refurbishments/developments to create a differentiated product which offers additional services centred around social interaction, health and wellbeing. This includes café space where workers can collaborate outside of their own office environment, fitness spaces and changing rooms with showers. This has been developed further in the case of a larger 33k sqm office building, where the Building Manager is responsible for organising communal exercise classes for the building's office workers in free to use studio space and supplementing this with an App that connects workers to personal trainers in the area, who may then use the building's studio to train in.

☑ Governance

Anti-bribery & corruption

Governance example 1, description

Appointment documentation of key business partners - such as asset managers, property managers - include obligations upon service providers to comply with anti-bribery legislation relevant to the jurisdictions in which they are. All appointments between InfraRed and service providers incorporate standard anti-bribery wording. This is monitored throughout a project's life by asking key service providers to complete quarterly compliance returns, as well as at monthly asset/property management meetings. We maintain policies that prohibit bribery and we seek to avoid working with business partners and contractors involved in corrupt or unethical practices.

Governance structure

Governance example 2, description

Each project is subject to a quarterly compliance review, covering matters such as fire, insurance, construction, asbestos, etc. This is challenged at a quarterly compliance meeting by the real estate management team and outcomes reported to Investment Committee.

Supply chain governance

Governance example 3, description

We adopt "best in class" appointment regimes for the appointment of building contractors and professional consultants. As well as ensuring that construction does not become an issue when assets are sold (as the suite of documents are of institutional grade), a robust approach here sets an expectation among our service providers that we expect works to be carried out in a way that minimises the impact on occupiers (where works are being carried out in a live environment) and a high degree of attention is paid to health and safety before and during works.

PR 06.3

Additional information.

Risks are identified at early stage through Red Flag checklist, focussing on energy consumption, EPC ratings (or similar) and environmental (flooding and in the case of development sites, contamination).

This helps focus due diligence activities and the evolution of value-add initiatives: for example, the scope of activities to include improving a property's energy rating, to reduce impact of use on environment and increase achievable rent/value.

Identified ESG issues do impact price offered, as Business Plans need to reflect cost of improving energy efficiency and of mitigating environmental risks identified during the due diligence process.

During one acquisition in 2019, of a parcel of land for a senior living opportunity in France, contamination was found during the due diligence process. The Business Plan was "enhanced" to include a significant remediation/containment programme to enable the whole site to be used effectively for the development and this was reflected in the pricing structure.

PR 08.1 Indicate if your organisation, and/or property managers, considers ESG issues in post-investment activities relating to your property assets.

PR 08.2 Indicate whether your organisation, and/or property managers, considers ESG issues in the following post-investment activities relating to your property assets.

We consider ESG issues in property monitoring and management
We consider ESG issues in property developments and major renovations.
We consider ESG issues in property occupier engagements
We consider ESG issues in community engagements related to our properties
We consider ESG issues in other post-investment activities, specify
Requirement for third party providers to comply with InfraRed's ESG policy in the conduct of their activities.

PR 08.3 Describe how your organisation, and/or property managers, considers ESG issues in post-investment activities related to your property assets.

Property / asset management reports typically cover ESG activities undertaken on a month by month basis.

In the case of retail properties in particular, community engagement initiatives are ever more important to create successful environments for our retailers and a visceral connection between our assets and the communities they serve. Such initiatives are monitored on a monthly basis, with twice yearly Centre Manager meetings to ensure knowledge is shared and a culture of continual improvement created around the team's ESG thinking and execution. This has led to a wide range of initiatives being delivered in 2019 that tie into InfraRed's sustainability themes, as well as driving the agenda through the supply chain.

Please see: https://www.ircp.com/sites/default/files/2019-12/ESG_Highlights_2019_Infrared.pdf

With regard to new developments and major refurbishments, we typically seek recognised environmental certifications, as outlined in this submission. We also require advisers to provide environmental impact statements to accompany refurbishment proposals, so the impact on E&S can be considered in the approval process.

Moreover, InfraRed asset managers actively engage and encourage service providers to deliver initiatives around the ESG agenda.

ESG initiatives identified during the selection process are recorded in InfraRed's investment management database - initiative, capital spend and timing for delivery - and reports have been developed to monitor progress against Business Plan.

In addition, Managing Agents are required to record utility consumption, waste to landfill / recycling and EPCs within InfraRed's property management database, whilst precedent leases prevent occupiers from undertaking works that will negatively impact the energy performance characteristics of their premises.

Once an investment has been made, ESG matters (including environmental compliance, health and safety matters, service provider performance and anti-bribery compliance) are continually monitored. Any issues identified are notified to the Investment Committee as soon as possible, and in any event, set out in the quarterly report produced by the relevant Asset Manager for each investment. These issues are discussed and considered at the Quarterly Portfolio Review with the relevant Investment Committee. Where shortcomings are identified, immediate actions are taken to rectify the position.

ESG is the first item on the agenda at each board meeting of the relevant General Partner. Discussions include corporate governance, compliance, adherence to anti-bribery and health and safety policies and any issues relating to ESG.

French office theme is focussed on creating "green" buildings and letting space on green leases to ensure premises are used in an environmentally effective $way.\ Underwrites\ seek\ to\ achieve\ minimum\ of\ HQE\ Excellent\ and\ BREEAM\ Good/Very\ Good\ which\ is\ being\ delivered\ through\ the\ refurbishment$ programmes.

Significant office development activity in Germany, where a range of energy efficient solutions are developed, from locally sourced materials, use of natural ventilation, chilled beam ventilation.

Refurbishment orientated projects, as opposed to ground up development, focus on using low energy components, such as LED lights, controls on M&E to minimise energy consumption during periods of low use, etc

Where possible, initiatives aimed at improving the health and wellbeing of workers and residents are incorporated. In the case of new developments, this typically occurs where InfraRed is placemaking. For example, InfraRed is compiling a planning application to transform an existing shopping centre in the UK into a new vibrant mixed-use scheme to include delivery of c.3000 new residential units (including affordable), retail, leisure and employment uses. A large focus of the planning application is the improvement of the public realm areas within the town centre to provide new parks, child play areas and enhanced landscaping and pedestrianised thoroughfare. These initiatives are underpinned by the principles of health and wellbeing and will be transformational for the local community.

ESG policy was implemented in 2013 on all new acquisitions across the different funds. In China the ESG Policy was incorporated into the tenant handbooks.

Tenant satisfaction surveys have been carried out across all UK shopping centre assets. Several shopping centres have seen qualitative research carried out with consumers, in order to understand their satisfaction and to help inform how assets might be operated to have greater resonance with the local community. This work is underpinned by quantitative research.

There is proactive engagement with tenants across asset classes in relation to energy consumption and waste generation, with a focus on minimising energy consumption and waste to landfill. This is done through direct dialogue with tenant and the regular provision of information. This ensures that the tenants understand the purpose of the activities and the importance of segregation of waste streams to ensure optimum recycling. In addition to this, the marketing strategies have encompassed a focus on sustainability which has increased both tenant and public engagement with these themes – a recent example of this has been a marketing initiative to compost ground coffee at our shopping centre in Basildon.

To summarise, LSG matters are fundamental to all InfraRed investment decisions across sectors, geographic locations and the scale of the investment. InfraRed manages several different funds with different investment parameters and strategies, including two that are publicly listed; the InfraRed ESG strategy and philosophy is a common requirement across all of these funds without any differentiation. Many of InfraRed's institutional investors have their own ESG requirements. InfraRed's overarching ESG philosophy has been developed to ensure that it exceeds these requirements.

As noted in the response to indicator INF 04.2 above, Side Letters can be used to record the requirements of individual investors in private funds, e.g. for investment in certain sectors to be considered an Excused Investment, with the option given not to participate. In practice, this is not normally a risk given the investment focus of the funds in question. Investment process controls ensure each new opportunity is screened against applicable investor requirements.

InfraRed's approach is based on well-established principles and continuous improvement. As standards increase and new areas take shape (e.g. in relation to climate change and the UN Sustainable Development Goals), InfraRed's investment process controls are being expanded and improved to

ensure that Deal Teams give adequate consideration to ESG issues and that the relevant Investment Committee can subject it to review and scrutiny.

As explained previously, InfraRed is also in the process of improving its ESG approach and integration within its investment and reporting processes, as part of its continuous improvement process.

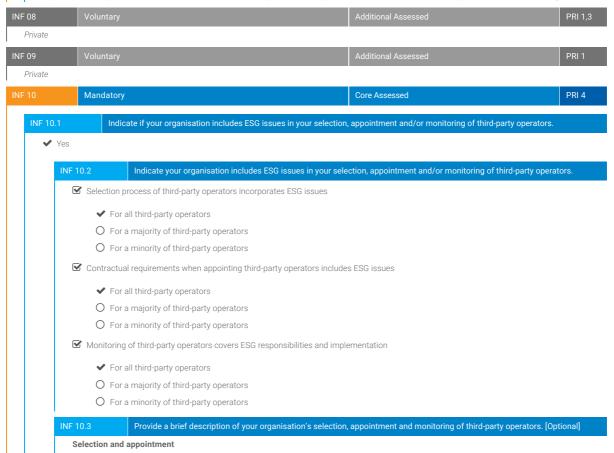

O No

INF 06 Private Mandatory PRI 1,3 Core Assessed Indicate which E, S and/or G issues are typically considered by your organisation in the investment selection process and list up to three ☑ Environmental Pollution risk, emissions BREAAM performance or local equivalent Effective sustainable material usage in construction Social Acceptable employment standards in all areas of the project Acceptable levels of Health & Safety performance Community relationships and interaction Effectiveness of Project Board Anti-bribery and corruption policies in place, the anti-bribery track record, and any red flags Senior management and board track record re: corporate governance and responsible stewardship

INF 07.2 Additional information. [Optional]

With regards to the 'Governance' issue of preventing bribery and corruption, InfraRed's global policy on regulatory risk requires enhanced due diligence to be carried out in relation to any Politically Exposed Persons, including national authorities awarding infrastructure projects.

In addition, InfraRed applies "enhanced due diligence" in respect of counterparties in any country rated "high risk", i.e. ranked at 50 or below in the Transparency International Corruption Perception Index or on the FATF list of high-risk and non-cooperative jurisdictions. In relation to Health & Safety, we also require Asset managers to undertake regular site visits including consideration of Health & Safety matters and employ external consultant who visit each project at least annually to provide an objective and expert view of Health & Safety. Follow up actions recommended by the consultant are tracked and reported in Board packs. ESG activities are also tracked and reported in Board packs and audited via the annual Responsible Investment Survey.

24 TRANSPARENCY

The InfraRed investment approach for new projects investing as a primary or "greenfield" investor at the project's inception is to ensure that it is working with other primary investors who have comparable in-house Responsible Investment, ESG and other policy standards to its own. This helps

ensure expectations are aligned during the investment process, including the appointment of a Managed Service Provider (i.e. the third-party operator).

InfraRed has a track record of selecting and appointing suitable Managed Service Providers, each of whom will be required to meet the InfraRed benchmark standard for ESG and other policies.

InfraRed now works with a reduced number of Managed Service Providers, having decided on its preferred contractors on the basis of strong track records, including ESG performance. InfraRed's model contract imposes our ESG standards, including duties for reporting.

Monitoring

Following the launch in 2017 of a new online platform, company's management team (whether a third party Management Service Provider or direct/secondee team), are expected to respond to a detailed annual questionnaire on its governance of ESG performance. This allows InfraRed to benchmark providers and direct attention to areas requiring it most. The results for 2019 show a further improvement over 2018 with both a higher response rate and improved scores. The number of projects scoring 100% on all factors tripled in 2019 compared to 2018.

As highlighted in INF 01.01, InfraRed is also looking to introduce formal sustainability searches on key project counterparties including Management Service Providers.

INF 10.4

Describe how your third-party operators contribute to the management of ESG issues for your infrastructure investments. [Optional]

The majority of InfraRed's investments are in project financed special purpose companies (SPC) where the operational activities of the SPC are subcontracted to a third-party Managed Service Provider. There are a small number of investments where a directly employed management team or a secondee management team is in place. An InfraRed Asset Manager will be appointed to the Board of the SPC to ensure adequate oversight and will carry out site visits at least annually and often more regularly.

The third-party operators are vital to the management of ESG issues as in the vast majority of cases it is they that have to fulfil these requirements supported by the SPC, if appropriate, with additional funding and/or resources. The Managed Service Providers are also responsible in the first instance for the contracting of key works and responsibilities, e.g. to a construction contractor or facilities management provider. ESG risk can lie at this level of operations, and the Managed Service Provider is effectively InfraRed's link to ESG matters at that level.

Managed Service Providers have contractual reporting requirements, including immediate escalation of material ESG issues, reporting on ESG initiatives, and annual completion of a detailed questionnaire for the project.

Indicate whether your organisation and/or operators consider ESG issues in post-investment activities relating to your infrastructure

INF 11.2

Indicate how your organisation, and/or operators, considers ESG issues in the following post-investment activities relating to your infrastructure assets.

- ✓ We consider ESG issues in the monitoring and operation of infrastructure
- ☑ We consider ESG issues in infrastructure maintenance
- ☑ We consider ESG issues in stakeholder engagements related to our infrastructure
- ☑ We consider ESG issues in other post-investment activities, specify

Monitoring and managing ESG issues on a cross-portfolio basis; applying lessons learnt to all relevant infrastructure assets

INF 11.3

Describe how your organisation, and/or operators, considers ESG issues in post-investment activities related to your infrastructure investments. [Optional]

As described in INF 10.3 and 10.4, typically a specialist Managed Service Provider is appointed to provide the day to day management oversight of the SPC's activities and contractual obligations and to implement the SPC Board's policies and aspirations. Where there is no separate appointment, it is because a team is employed directly by the SPC. The Managed Service Provider or team provides a link between all the project's stakeholders seeking to align all parties' ESG aspirations as part of their duties. Stakeholders include the SPC's Clients, End-Users, Funders/Lenders, Service Providers, Insurers and the local community in which the project is located.

At least one InfraRed Asset Manager is appointed director for each project investment. The InfraRed Asset Manager takes an active role in managing the project and attends regular Board meetings (typically monthly during construction and the early operational stage thereafter reducing to quarterly) where a full operational and financial report, including ESG and Health & Safety matters, is considered. The Management Service Provider is provided with direction and guidance on such matters by the Board, as appropriate. Periodic site visits are made, often in conjunction with the Board meeting, which are often conducted at the project for that purpose.

InfraRed continues to use its successful online platform it has developed through which all Managed Service Providers of infrastructure investment SPCs complete an annual questionnaire in respect of their ESG performance. This includes status of ESG policies, delivery of specific initiatives and broader oversight of the project's ESG profile over and above the regular Board reports from the management team. This portal allows the capture of additional documentary evidence of each SPC's performance against the 27 KPIs that have been established. The responses are then benchmarked by InfraRed and result in effective, actionable feedback from InfraRed to the Management team. This comprehensive review and analysis is undertaken by an independent consultant appointed by InfraRed so as to provide an objective and independent review of performance. The portal also enables us to store key Governance documents for related to each project.

InfraRed also provides support through a "best practice guidance" reference document, developed in consultation with its asset management team members and Managed Service Providers, as well as a template ESG policy statement for adoption by individual projects, subject to the approval of all co-shareholders.

InfraRed's primary access point to ensure that its Responsible Investment aspirations are met and that it is able to influence ESG matters is via the SPC Board meeting in the majority of its investments. The management team will be encouraged to identify activities which support the community served by the project, or project-based activity that benefits the wider community, that the SPC and its third-party operators can support with either direct funding or pro bono support. Many of the third-party operators are large corporations in their own right with active community initiatives at an individual project as well as wider regional/national initiatives which often benefit from the additional support of the SPC.

INF 12.1

Indicate the proportion of infrastructure assets for which your organisation and/or operators included ESG performance in investment monitoring during the reporting year.

- → >90% of infrastructure assets
- O 51-90% of infrastructure assets
- O 10-50% of infrastructure assets
- O <10% of infrastructure assets

INF 12.2

Indicate ESG issues for which your organisation, and/or operators, typically sets and monitors targets (KPIs or similar) and provide examples per issue.

☑ Environmental

Social infrastructure investments typically have energy usage targets by comparison to the building volume. The energy usage strips out weather effects to isolate true performance.

Utility usage reduction initiatives are actively encouraged for all projects.

The general condition of the project facilities are monitored annually.

Social

Sponsorship/community support initiatives are actively encouraged wherever possible. Activities are recorded and expenditure is tracked against a budget. An annual review is undertaken.

All Special Project Companies (SPCs) are required to have a Health & Safety policy and effective processes and procedures to ensure compliance.

All SPCs are required to have effective anti-discrimination policies in place for all contracted organisations within the projects. An annual review is undertaken.

☑ Governance

All Board meetings of the SPCs to be presented with and discuss the management team's Health & Safety report.

All Board meetings of the SPCs to be presented with and discuss the management team's ESG report.

An Infrared director is expected to undertake a H&S inspection of the asset annually and no less frequently than every 18 months.

☐ We do not set and/or monitor against targets

INF 12.3

Additional information. [Optional]

InfraRed's portfolio of investments is concentrated in the Social Infrastructure sector. Typically, such projects have KPIs established by the Client in the project agreement documentation for energy usage (gas and electricity) and in a proportion of investments for water usage. The energy KPIs almost always relate to the amount used for a given volume of building.

A full description of the monitoring activities undertaken via the SPC Boards is included in the response to INF 11.3.

InfraRed's ESG and Sustainability approach is to treat all its assets, whatever the sector or geographic location, in an equal manner with similar expectations for outcomes. However, it is recognised that some of the individual assets have contracted activities that directly affect the local community and hence will have a greater scale of impact on that community. As an example, a hospital project, where the SPC undertakes all maintenance, cleaning and catering, has a greater ability to connect with the local community both directly and indirectly through its Client than a road project based on an availability criteria. However, the road and its operation have a greater potential for environmental damage in some circumstances if maintenance standards are not continuously provided to a high standard and therefore the focus is on ensuring environmental factors are managed effectively.

As part of the review InfraRed completed with its sustainability consultant, InfraRed is in the process of developing a sustainability reporting framework which will enable us to consistently report sustainability performance of our assets, portfolio and our internal corporate operations. This sustainability reporting framework will build off the existing annual ESG questionnaire referred to in INF 11.3 and is expected to be finalised and implemented in 2020. InfraRed expects to issue its first annual sustainability report in 2021.

- → >90% of infrastructure investees
- O 51-90% of infrastructure investees
- O 10-50% of infrastructure investees
- >0% and <10% of infrastructure investees0% of infrastructure investees

•

INF 13.3

Describe how your organisation, and/or your operators, contribute to the infrastructure investees' management of ESG issues. [Optional]

In INF 05 there is a description of the InfraRed processes and principles that ensure that the investees, other stakeholders and delivery partners are required to meet key Responsible Investment and ESG benchmarks before InfraRed will select them where it is a primary "greenfield" investment or invest in the asset if the transaction is in the secondary market. ESG matters are a key selection benchmark that must be considered if the investment is to proceed. Consequently, InfraRed has partner organisations that share its objectives allowing effective collaborative working on such issues

InfraRed has two major ways to engage with ESG matters on its assets. Firstly, the Management Service Provider appointed to manage the assets on a day to day basis will have ESG service delivery obligations in its appointment that will require it to engage with the operators, subcontractors and clients on a regular basis. They will be obliged to report to the SPC's Board on ESG issues as part of the routine management reports. Secondly the InfraRed individual Asset Manager, who will be a member of that SPC Board, will raise relevant ESG issues at the regular Board meetings including the provision of feedback from across the InfraRed portfolio sharing best practice and other useful information. InfraRed's policy is to have one of the Board of directors appointed to take specific ESG responsibility. On many projects there will be periodic liaison meetings between the

SPCs Board and the Board of directors of the SPC's client and ESG issues are routinely raised at this level to assist the project teams in their daily management level ESG efforts.

Previously, InfraRed has produced a comprehensive guidance document "ESG Best Practice Guidance for SPV Managers (Infrastructure Projects)" that it developed in consultation with its Asset Management Team members and Management Service Providers, This includes examples of ESG initiatives and best practice together with an overview of responsibilities and InfraRed's objectives.

In 2016 InfraRed started organising annual half day workshops with many of its management service provider teams focused on improving their approach to Responsible Investment. In 2019, separate reviews were held with the leading MSPs to review their performance in the 2018 survey and to identify specific areas for improvements to be implemented in 2019.

O No

INF 15 Mandatory Core Assessed PRI 2

INF 15.1 Indicate the proportion of active infrastructure maintenance projects where ESG issues have been considered.

✓ >90% of active maintenance projects

○ 51-90% of active maintenance projects

○ 10-50% of active maintenance projects

○ <10% of active maintenance projects

○ N/A, no maintenance projects of infrastructure assets are active

INF 15.2 Describe your approach to ESG considerations for infrastructure maintenance projects. [Optional]

InfraRed's approach is to encourage a thorough, wide-ranging and rigorous ESG management plan from the project's inception under the direction of the

InfraRed Investment Director. Issues considered to be of significant importance for pre-development projects include:

- site selection (where possible, in many projects the specific site has already been predetermined by the Client in order to satisfy their particular needs)
- energy performance (where UK based projects will be expected to achieve a BREEAM excellent performance and non-UK projects a local equivalent where available)
- construction and maintenance contractor selection (where a requirement will be a contractor with their own strong ESG and Health & Safety policies and proven track record)
- · contractual requirements setting out best practice objectives

As already described in previous sections InfraRed has a strong ESG management approach to the on-going operational activities of all its investments whether these SPCs are ones where InfraRed was an original primary investor directly involved with the development stage or is a secondary investor purchasing the investment during or after the development stage. For the secondary investment projects ESG performance is a key investment decision where acceptable standards must be achieved for the investment to be made. InfraRed requires that an active ESG improvement approach is adopted on all maintenance phase assets particularly for energy and water usage and waste reduction and actively seeks the cooperation of all stakeholders to an asset who have a part to play in these activities. If appropriate InfraRed will invest in "spend to save" ESG opportunities as well as community interaction projects.
